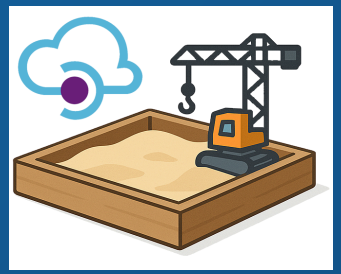
AZURE · API MANAGEMENT

Azure API Management Samples



Deploy high-fidelity APIM infrastructures in minutes and experiment with real-world policy samples — an innovative *à la carte* approach that is ***neither too much nor too little***.

February 2026

https://aka.ms/apim/samples

Today's Agenda

What we'll cover in the next hour

1. Motivation — The APIM learning gap
2. What's inside — Infrastructures & samples
3. Why this approach — Key differentiators
4. Live demo — Deploy & explore in Azure
5. Customer scenarios & how you can help
6. Summary & Q&A

01

The Motivation

Why does APIM Samples exist, and what problem does it solve?

The APIM Experimentation Gap

Experimenting with Azure API Management has historically fallen into two extremes — both leaving a gap for customers and engineers who need something more practical and focused.

🚧

Too Much

Full landing zone accelerators are comprehensive and production-grade, but can feel **overwhelming** when you just want to experiment with policies or compare architectures. The setup effort is significant.

📋

Too Little

Isolated policy snippets are handy references, but they **assume an existing infrastructure**. Without a running APIM instance, you can't try them in context or see how they interact with real architectures.

🎯

Just Right

APIM Samples bridges this gap: real, deployable infrastructures paired with real-world policy samples. It's *neither too much nor too little* — it's just right.

The À La Carte Approach

APIM Samples decouples **infrastructure** from **samples**. Deploy any architecture, then layer on any compatible sample — mix and match freely. Together, the whole becomes greater than the sum of its parts.

⚙ Infrastructures

- 5 production-grade architectures from simple to fully-private
- Deploy via Jupyter notebooks — guided, step-by-step
- Bicep IaC for repeatable, parameterized deployments

📚 Samples

- 8 real-world scenarios covering auth, costing, mapping, and more
- Each sample is self-contained with its own notebook and policies
- Most samples work with *any* infrastructure

🧩 Mix & Match

Any infrastructure
+
any compatible sample
=
your custom lab

A flexible combination where *1 + 1 feels like 3*.

02

What's Inside

Infrastructures, samples, and key features at a glance

5 Infrastructure Architectures

From simple public access to fully-private enterprise-grade networking

Simple API Management

Publicly accessible APIM instance. Fastest to deploy (~5 min). Great for getting started.

~$1-2/hr

APIM & Container Apps

APIs in Azure Container Apps with public access. Ideal for container-based backends.

ACA Backend

Front Door & APIM (Private Link)

Azure Front Door to APIM via private link. Traffic rides the Microsoft backbone.

Standard V2

App Gateway & APIM (Private Link)

Application Gateway to APIM via Private Link, using a private endpoint for the inbound connection.

Standard V2

App Gateway & APIM (VNet Injection)

Full VNet injection of APIM and ACA. Maximum network isolation. APIM is shielded unless traffic comes through App Gateway.

Max Isolation

8 Real-World Policy Samples

From authentication & authorization to cost tracking and secure access patterns

General
Basic APIM setup & policy usage. Perfect starting point.

AuthX
JWT authentication & role-based authorization with a mock HR API.

AuthX Pro
Advanced multi-API auth with reusable policy fragments.

Azure Maps
Proxying calls to Azure Maps through APIM policies.

Costing & Showback
Track API costs per business unit via subscriptions & Log Analytics.

Credential Manager
APIM Credential Manager with Spotify's REST API.

Load Balancing
Priority & weighted load balancing across backends.

Secure Blob Access
Valet key pattern for secure Azure Blob Storage access.

https://aka.ms/apim/samples

Infrastructure × Sample Compatibility

Most samples work with all infrastructures — a truly *à la carte* experience.

Infrastructure & Sample Compatibility

Many samples can be deployed onto many infrastructures (many-to-many)

SAMPLES \ INFRASTRUCTURES	Simple APIM (simple-apim)	APIM + ACA (apim-aca)	AFD + APIM (PE) (afd-apim-pe)	App GW + APIM (appgw-apim)	App GW + APIM (PE) (appgw-apim-pe)
AuthX	✓	✓	✓	✓	✓
AuthX Pro	✓	✓	✓	✓	✓
Azure Maps	✓	✓	✓	✓	✓
Costing	✓	✓	✓	✓	✓
General	✓	✓	✓	✓	✓
Load Balancing	✗ [1]	✓	✓	✓	✓
OAuth 3rd-Party	✓	✓	✓	✓	✓
Secure Blob Access	✓	✓	✓	✓	✓

✓ Compatible ✗ Not compatible

Infrastructure × SKU Compatibility

Each infrastructure supports specific APIM SKUs based on its networking requirements.

Infrastructure & SKU Compatibility

Which APIM SKUs are supported by each infrastructure

INFRASTRUCTURES	APIM SKUs						
	Classic Tiers (V1)				V2 Tiers		
	Developer	Basic	Standard	Premium	BasicV2	StandardV2	PremiumV2
Simple APIM (simple-apim)	✓	✓	✓	✓	✓	✓	✓
APIM + ACA (apim-aca)	✓	✓	✓	✓	✓	✓	✓
AFD + APIM (PL) (afd-apim-pe)	✗	✗	✗	✗	✗	✓	✓
App GW + APIM (appgw-apim)	✓	✗	✗	✓	✗	✗	✓
App GW + APIM (PL) (appgw-apim-pe)	✗	✗	✗	✗	✗	✓	✓

✓ Compatible ✗ Not compatible

03

Why This Approach

Key differentiators that set APIM Samples apart

Key Differentiators

Modular & Flexible

Mix any infrastructure with any compatible sample. Not a monolith — truly à la carte.

Guided Notebooks

Jupyter notebooks walk you through every step. No guessing, no tribal knowledge.

Fast to Deploy

Simple APIM in ~5 minutes. Not hours of landing zone setup before you can experiment.

One-Click Setup

GitHub Codespaces or Dev Container. Everything pre-configured, no local prerequisites.

Modern Tooling

Bicep IaC, Developer CLI, pytest, ruff, code coverage. Professional development workflow.

Quality & Trust

OpenSSF Best Practices certified. CI/CD pipeline. Cross-platform (Windows, Linux, macOS).

04

Live Demo

Deploying an infrastructure, running a sample, and exploring in Azure Portal

Demo: Getting Started

1

Open in Codespaces

One-click launch from the repository. Environment is ready in 2-3 minutes with everything pre-installed.

2

Developer CLI

Run `./start.sh` (macOS/Linux) or `.\start.ps1` (Windows) to access the interactive menu. Verify setup, run tests, manage workflows.

3

Deploy Infrastructure

Open an infrastructure's `create.ipynb` and run all cells. Resources appear in Azure Portal.

4

Run a Sample

Open a sample's `create.ipynb`, run all cells, make API calls, and experiment with policies.

Let's see it in action! — We'll deploy an infrastructure and run a sample live.

Demo: In the Azure Portal

Once deployed, explore the resources in the Azure Portal to see everything APIM Samples creates.

Infrastructure Resources

- **API Management service** — The core APIM instance with configured APIs and policies
- **Application Insights** — Monitoring, logging, and diagnostics for API calls
- **Networking** — VNets, subnets, NSGs, private endpoints (depending on infrastructure)
- **Container Apps** — Backend APIs running in ACA (where applicable)

What to Explore

- **APIs & Operations** — See deployed APIs, their operations, and test them directly
- **Policy Editor** — View and edit inbound, outbound, and backend policies
- **Subscriptions** — Manage API keys and access control
- **Diagnostics** — Trace API calls, view logs, and monitor performance

05

Empowering Customers

Unlock your API management potential

Customer Success Scenarios

Discovery & Education

Show customers real architectures in action. Experience different APIM configurations hands-on, not just on paper.

Proof of Concept

Deploy an infrastructure matching your scenario and test relevant samples. See policy behaviors in a real, risk-free environment.

Policy Prototyping

Safely experiment with policies before production. Test auth flows, rate limiting, transformations, and more in a sandbox environment.

Empower Independence

Fork the repo and build your own solutions. Guided notebooks and clear documentation make self-service success straightforward.

How You Can Help

Every contribution makes APIM Samples better for everyone

Star & Share

Star the repo and share it with your network and customers.

Try & Give Feedback

Run the samples, file issues, and suggest improvements.

Contribute

Add new samples, improve docs, or enhance existing code.

Use in Engagements

Leverage it with customers and share what you learn back.

https://aka.ms/apim/samples

What We Covered

APIM Samples fills the gap between "too much" and "too little" — offering a flexible, modular, and guided approach to learning and experimenting with Azure API Management.

Educate

5 architectures spanning simple public access to fully-private enterprise networking.

Empower

8 real-world samples with guided Jupyter notebooks and à la carte flexibility.

Accelerate

High-fidelity building blocks, modern tooling, and Codespaces for instant setup.

"Neither too much nor too little. Just right."
