AZURE · API MANAGEMENT

Azure API Management Samples

Deploy high-fidelity APIM infrastructures in minutes and experiment with real-world policy samples — an innovative *à la carte* approach that is ***neither too much nor too little***.

August 2026

Today's Agenda

What we'll cover in the next hour

1. Motivation — The APIM learning gap
2. What's inside — Infrastructures & samples
3. Why this approach — Key differentiators
4. Live demo — Deploy & explore in Azure
5. Customer scenarios & how you can help
6. Summary & Q&A

https://aka.ms/apim/samples

01

The Motivation

Why does APIM Samples exist, and what problem does it solve?

The APIM Experimentation Gap

Experimenting with Azure API Management has historically fallen into two extremes — both leaving a gap for customers and engineers who need something more practical and focused.

Too Much

Full landing zone accelerators are comprehensive and production-grade, but can feel **overwhelming** when you just want to experiment with policies or compare architectures. The setup effort is significant.

Too Little

Isolated policy snippets are handy references, but they **assume an existing infrastructure**. Without a running APIM instance, you can't try them in context or see how they interact with real architectures.

Just Right

APIM Samples bridges this gap: real, deployable infrastructures paired with real-world policy samples. It's *neither too much nor too little* — it's just right.

The À La Carte Approach

APIM Samples decouples **infrastructure** from **samples**. Deploy any architecture, then layer on any compatible sample — mix and match freely. Together, the whole becomes greater than the sum of its parts.

⚙ Infrastructures

- 5 production-grade architectures from simple to fully-private
- Deploy via Jupyter notebooks — guided, step-by-step
- Bicep IaC for repeatable, parameterized deployments

📚 Samples

- 12 real-world scenarios covering auth, networking, costing, AI migration and failover, and more
- Each sample is self-contained with its own notebook and policies
- Most samples work with *any* infrastructure

🧩 Mix & Match

Any infrastructure
+
any compatible sample
=
your custom lab

A flexible combination
where *1 + 1 feels like 3*.

02

What's Inside

Infrastructures, samples, and key features at a glance

5 Infrastructure Architectures

From public access to private networking. Container Apps backends use MockAPI with authenticated dashboards and persistent configuration.

Simple API Management

Publicly accessible APIM instance. Fastest to deploy (~5 min). Great for getting started.

~$1-2/hr

APIM & Container Apps

Two HTTPS MockAPI backends with authenticated dashboards and private Blob connectivity for persistent configuration.

MockAPI Backends

Front Door & APIM (Private Link)

Azure Front Door to APIM via private link. Optional MockAPI backends in VNet-integrated Container Apps.

Standard V2

App Gateway & APIM (Private Link)

Application Gateway to APIM via Private Link. Optional MockAPI backends in VNet-integrated Container Apps.

Standard V2

App Gateway & APIM (VNet Injection)

Full VNet injection of APIM and ACA. Optional MockAPI backends use private ingress. APIM is shielded unless traffic comes through App Gateway.

Max Isolation

12 Real-World Policy Samples

From authentication & authorization to network routing, cost tracking, and secure access patterns

AuthX

JWT authentication & role-based authorization with a mock HR API.

AuthX Pro

Advanced multi-API auth with reusable policy fragments.

Azure Maps

Proxying calls to Azure Maps through APIM policies.

Azure OpenAI v1 Migration

Test a dated legacy API, add v1 alongside it, and verify both contracts.

Costing

Track API costs per business unit via subscriptions, Entra ID apps, and AI Gateway tokens across *both Azure OpenAI Chat Completions and Responses APIs*, including streaming (SSE) token usage (not simple to capture correctly in APIM).

Dynamic CORS

Per-API CORS origin validation with custom policy fragments & maintainable origin mappings.

Egress Control

Route APIM outbound traffic through Azure Firewall in a hub/spoke topology.

General

Basic APIM setup & policy usage. Perfect starting point.

Inference Failover

Route compatible Azure OpenAI models through priority and weighted APIM backend pools with focused LLM failover and token telemetry.

Load Balancing

MockAPI pools: priorities, weights, retries, and

OAuth 3rd-Party

APIM Credential Manager with Spotify's REST API

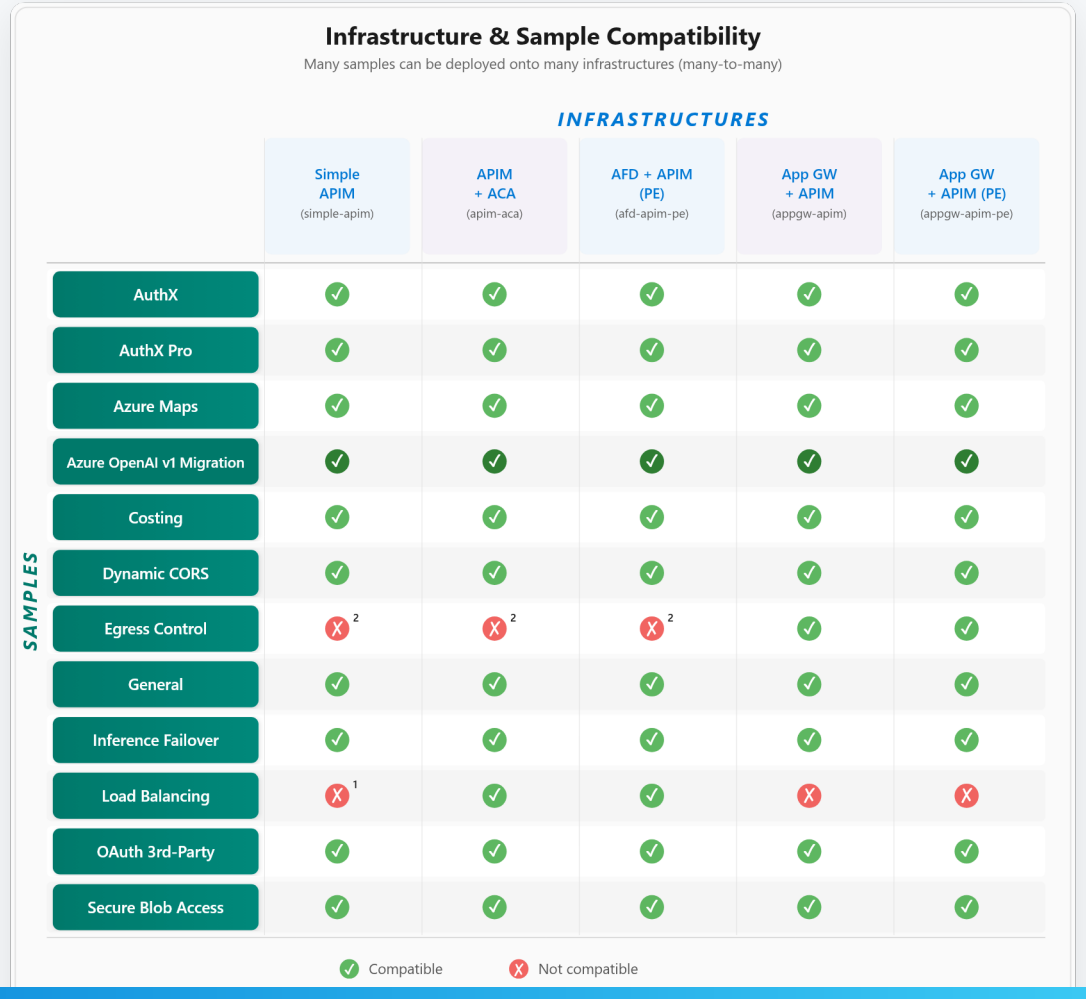

Secure Blob Access

Valet key pattern for secure Azure Blob Storage

https://aka.ms/apim/samples

Infrastructure × Sample Compatibility

Most samples work with all infrastructures — a truly *à la carte* experience.

https://aka.ms/apim/samples

Infrastructure × SKU Compatibility

Each infrastructure supports specific APIM SKUs based on its networking requirements.

Infrastructure & SKU Compatibility

Which APIM SKUs are supported by each infrastructure

INFRASTRUCTURES	APIM SKUs: Classic Tiers (V1)				V2 Tiers		
	Developer	Basic	Standard	Premium	BasicV2	StandardV2	PremiumV2
Simple APIM (simple-apim)	✓	✓	✓	✓	✓	✓	✓
APIM + ACA (apim-aca)	✓	✓	✓	✓	✓	✓	✓
AFD + APIM (PL) (afd-apim-pe)	✗	✗	✗	✗	✗	✓	✓
App GW + APIM (appgw-apim)	✓	✗	✗	✓	✗	✗	✓
App GW + APIM (PL) (appgw-apim-pe)	✗	✗	✗	✗	✗	✓	✓

✓ Compatible ✗ Not compatible

PL = Private Link. Private Link infrastructures require StandardV2 or PremiumV2. VNet injection (appgw-apim internal mode) supports Developer, Premium, or PremiumV2.

03

Why This Approach

Key differentiators that set APIM Samples apart

Key Differentiators

Modular & Flexible

Mix any infrastructure with any compatible sample. Not a monolith — truly à la carte.

Guided Notebooks

Jupyter notebooks walk you through every step. No guessing, no tribal knowledge.

Fast to Deploy

Simple APIM in ~5 minutes. Not hours of landing zone setup before you can experiment.

One-Click Setup

GitHub Codespaces or Dev Container. Everything pre-configured, no local prerequisites.

Modern Tooling

Bicep IaC, Developer CLI, pytest, ruff, code coverage. Professional development workflow.

Quality & Trust

OpenSSF Best Practices certified. CI/CD pipeline. Cross-platform (Windows, Linux, macOS).

04

Live Demo

Deploying an infrastructure, running a sample, and exploring in Azure Portal

Demo: Getting Started

1

Open in Codespaces

One-click launch from the repository. Environment is ready in 2-3 minutes with everything pre-installed.

2

Developer CLI

Run `./start.sh` (macOS/Linux) or `.\start.ps1` (Windows) to access the interactive menu. Verify setup, run tests, manage workflows.

3

Deploy Infrastructure

Open an infrastructure's `create.ipynb` and run all cells. Resources appear in Azure Portal.

4

Run a Sample

Open a sample's `create.ipynb`, run all cells, make API calls, and experiment with policies.

Let's see it in action! — We'll deploy an infrastructure and run a sample live.

Demo: In the Azure Portal

Once deployed, explore the resources in the Azure Portal to see everything APIM Samples creates.

Infrastructure Resources

- **API Management service** — The core APIM instance with configured APIs and policies
- **Application Insights** — Monitoring, logging, and diagnostics for API calls
- **Networking** — VNets, subnets, NSGs, private endpoints (depending on infrastructure)
- **MockAPI backends** - Two Container Apps with authenticated dashboards and Blob-backed configuration (where enabled)

What to Explore

- **APIs & Operations** — See deployed APIs, their operations, and test them directly
- **Policy Editor** — View and edit inbound, outbound, and backend policies
- **Subscriptions** — Manage API keys and access control
- **Diagnostics** — Trace API calls, view logs, and monitor performance
- **MockAPI dashboards** - Edit endpoints with the printed credentials; clear notebook output before sharing

05

Empowering Customers

Unlock your API management potential

Customer Success Scenarios

Discovery & Education

Show customers real architectures in action. Experience different APIM configurations hands-on, not just on paper.

Proof of Concept

Deploy an infrastructure matching your scenario and test relevant samples. See policy behaviors in a real, risk-free environment.

Policy Prototyping

Safely experiment with policies before production. Test auth flows, rate limiting, transformations, and more in a sandbox environment.

Empower Independence

Fork the repo and build your own solutions. Guided notebooks and clear documentation make self-service success straightforward.

How You Can Help

Every contribution makes APIM Samples better for everyone

Star & Share

Star the repo and share it with your network and customers.

Try & Give Feedback

Run the samples, file issues, and suggest improvements.

Contribute

Add new samples, improve docs, or enhance existing code.

Use in Engagements

Leverage it with customers and share what you learn back.

What We Covered

APIM Samples fills the gap between "too much" and "too little" — offering a flexible, modular, and guided approach to learning and experimenting with Azure API Management.

Educate

5 architectures spanning simple public access to fully-private enterprise networking.

Empower

12 real-world samples with guided Jupyter notebooks and à la carte flexibility.

Accelerate

High-fidelity building blocks, modern tooling, and Codespaces for instant setup.

"Neither too much nor too little. Just right."
